Differential Current Sensor for IC-CPD acc. to the standard IEC62752-2016

Date: 11.10.2021

Page 1 of 7

K-No.: 30139

Description

toroidal core

PCB mounting

Customer: Standard type

• Fluxgate current sensor with

Characteristics

- Excellent accuracy
- AEC-Q qualified components
- Switching open-collector outputs
- Compact design

Applications

Mainly used for stationary and mobile applications:

- IC-CPD
- Wallbox

Patents: EP2571128 / US9397494 / CN103001175 // EP2813856

Electrical data	– Ratings	min.	typ.	max.	Unit
I P	Primary nominal RMS current (1phase / 3phase)			80 / 40	Α
$I_{\Delta N1}$	Rated residual operating current 1		6		mA DC
$I_{\Delta N2}$	Rated residual operating current 2		30		mA rms
I _{ΔN1, tolerance}	Trip tolerance 1	4	5	6	mA DC
I _{ΔN2, tolerance}	Trip tolerance 2	20		130(1)	mA rms
Spwm-out	Scaling factor of the DC component I _{ΔN1} (for monitoring purpose only!)		3.33		%/mA
I _{ΔRI,1/2} (Fig.1)	Recovery current level for I _{ΔN1} /I _{ΔN2} (absolute value DC/rms)		2.5 / 10		mA

(1) f = 1kHz to 2kHz

Accuracy - Dynamic performance data

I ΔN,max	wax. measuring range (peak)	-300	+300	mA
Χ	Resolution (@ $I_{\Delta N}$, $\Theta_A = 25^{\circ}$ C)	< 0	.2	mA
t _r (Fig.3)	Response time	Acc	ording to IEC62752:20	16 ⁽³⁾
f _{BW} (Fig.4)	Frequency range	DC	2	kHz
General data				
ϑ_A	Ambient operation temperature	-40	85	°C
9 Storage	Ambient storage temperature ⁽⁴⁾	-40	85	°C
m	Mass	21		g
Vcc	Supply voltage	4.8	5.2	V
Icc	Consumption current	38	45	mA
Sclear, ps	Clearance (primary to secondary)	not applic	able if isolated cable is	used ⁽⁵⁾
Screep, ps	Creepage (primary to secondary)	not applic	able if isolated cable is	used ⁽⁵⁾
FIT	EN/IEC 61709 / SN 29500 ⁽⁶⁾ (MIL-HDBK-217F) ⁽⁶⁾		1529 6349)	fit

 $^{^{(3)}}$ Switching time of a standard relay (t = 20ms) is considered.

General description of sensor function:

The Sensor is sensitive to AC and DC current and can be used for fault current detection in IC-CPD applications. The Sensor detects AC and DC fault currents according to IEC62752:2016. In the event of a DC fault current, PIN 3 will change it's state from a low level (GND) to high impedance level. In event of an AC current fault, PINs 3 and 4 will change state from a low level (GND) to a high impedance level. Error conditions (e.g. an internal error) are signaled on PIN 1 (ERROR-OUT).

Datum	Name	Index	Änderung						
11.10.2021	BZ	81	Patents added on	tents added on sheet 1. CN-21-290					
23.09.20	MB	81	Final test: change	inal test: change of value from TC1 and TC2; remove LV2 and LV4; rename LV3 to LV2. Minor change					
Editor.: R&D-PD-NPI D		Designer: MB		MC-PM: BZ			Released by: SB		

⁽⁴⁾ see VAC M-sheet 3101; storage temperature inside cardboard packaging

⁽⁵⁾ Constructed, manufactured and tested in accordance with IEC60664-1:2007 Isolated wires are preferred. If isolated primary conductors are used, the isolation coordination is according to: Reinforced insulation, Insulation material group 1, Pollution degree 2, altitude ≤ 4000m and overvoltage category II.

⁽⁶⁾ The results are valid under following conditions: 55°C mean component ambient temperature by continuous operation (8760h per year); Environment condition: ground mobile, no dust or harmful substances, according to IEC61709; Fit equals one failure per 10^9 component hours.

Differential Current Sensor for IC-CPD acc. to the standard IEC62752-2016

Date: 11.10.2021

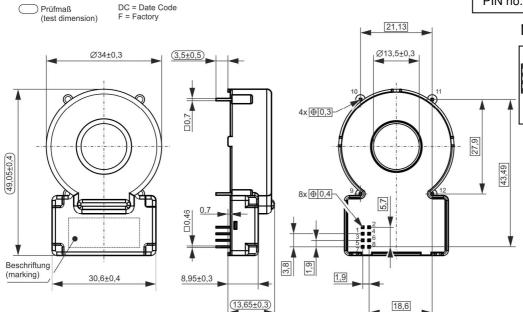

K-No.: 30139

Customer: Standard type Page 2 of 7

Connections:

PIN no. 1-8: 0.46mm x 0.46mm PIN no. 9-12: 0.7mm x 0.7mm

Marking:

benvac 4641-X905 F DC

Content of Data-Matrix-Code is: benvac, 4641-X905, F, DC

Datecode Format: [YWW] Example: M02: 2020, Week 2

PIN description:

PIN no.	Description
PIN 1 → ERROR-OUT (open collector output)	If no system fault is detected, the output PIN 1 is a low level (GND). If a system fault is detected, PIN 1 is high impedance. In this case, PINs 3 and 4 will be set to a high impedance state (see tab. 1).
	A function test including an offset measurement (this value is stored in EEPROM for further calculation) is activated if this PIN is connected to GND for a period of 30ms to 1.2s. If the PIN is set to GND less than 30ms or more than 1.2s, no function test will be performed.
PIN 2 → TEST-IN (refer to Fig. 2)	Attention: During the functional test and offset measurement, no differential current may flow.
	To ensure high accuracy of the sensor this test should be activated at regular intervals (e.g. at startup, before measuring).
	If a push-pull switch is used, the voltage range must be 0V5V.
PIN 3 → X6-OUT (open collector output)	If the residual current is below 6mA dc and no system fault occurs the output on PIN 3 is a low level (GND). In any other case output PIN 3 is in a high impedance state. If PIN 4 is high impedance, PIN 3 will also be set to high impedance (see tab. 1).
PIN 4 → X30-OUT (open collector output)	If the residual current is below the 30mA rms and no system fault occurs the output on PIN 4 is a low level (GND). In any other case PINs 3 and 4 is in a high impedance state (see tab. 1).
PIN 5 → GND	Ground connection
PIN 6 → VCC	Positive supply voltage
PIN 7 → PWM-OUT	Acc. to the DC component of residual current a duty-cycle with f=8kHz is generated. This is for monitoring purposes only and is not safety function!
	Refer to S _{PWM-OUT} = 3.33%/mA
PIN 8 → N.C.	Not connected

Item no.: T60404-N4641-X905

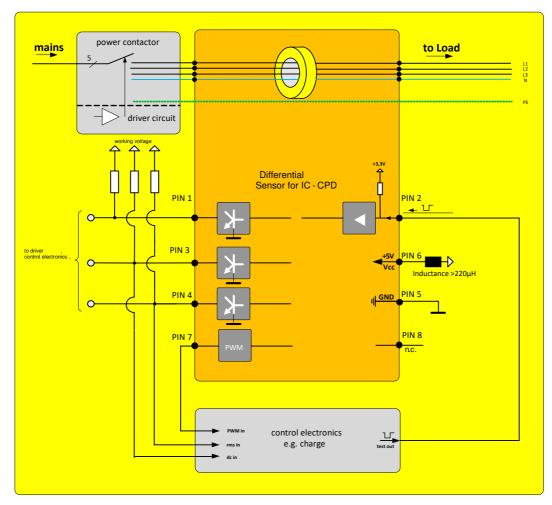

Differential Current Sensor for IC-CPD acc. to the standard IEC62752-2016

Customer: Standard type Page 3 of 7

Typical application diagram:

Absolute maximum Ratings(6):

		Min	Тур.	Max	Unit
Vce	Collector-Emitter voltage (PINs 1, 3 and 4)			40	V
Ic	Collector current (PINs 1, 3 and 4)			50	mA
Vcc	Maximum supply voltage (without function)	-0.3		7	V
Uмах	Maximum rated voltage of primary conductors (AC rms)			250	V
V _{TEST-IN, low}	TEST-IN Input Voltage, low level	0		0.6	V
VTEST-IN, high	TEST-IN Input Voltage, high level	2.5		5	V

(5) Stresses above these ratings may cause permanent damage. Exposure to these conditions for extended periods may degrade device reliability. Functional operation of the device at these or any other conditions beyond those specified is not supported.

Requalification Tests: (replicated every year, Precondition acc. to M3238)

Ûw, prim-sec	M3064	Impulse test (1.2µs/50µs waveform) PIN 1-8 vs. insulated primary wire 5 pulse → polarity +, 5 pulse → polarity -	5.5	kV rms
U _d	M3014	Test voltage, 60s PIN 1-8 vs. insulated primary wire	1.5	kV rms
U _{PDE}	M3024	Partial discharge voltage (extinction) PIN 1-8 vs. insulated primary wire *acc. to table 24	1.2	kV rms
U _{PD} x 1.875	M3024	Partial discharge voltage (extinction) PIN 1-8 vs. insulated primary wire *acc. to table 24	1.5	kV rms

^{*} IEC 61800-5-1:2007

Other instructions:

- Temperature of the primary conductor should not exceed 105°C.
- Vcc during Test-IN function test must be at least 4.8V
- Fall- and rise-time of Vcc 2...50μs/V

Figures:

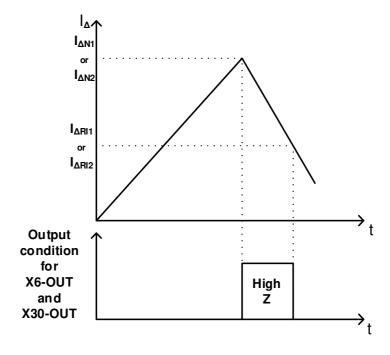

Fig. 1: Meaning of switching recovery level

If the trip-level $I_{\Delta N1}/I_{\Delta N2}$ is accomplished the output X6-OUT/X30-OUT will change it state from low-level (GND) to high impedance. Depending on the existence of the differential curent I_{Δ} , the outputs X6-OUT/X30-OUT will remain in this state until I_{Δ} fell below recovery threshold $I_{\Delta R11}/I_{\Delta R12}$.

Customer: Standard type Page 6 of 7

After activating the test sequence, the end product has to monitor the correct state of the switching outputs being used at the following points in time

check that 6mA dc OUT is disabled (latest time)

M2: check that 30mA rms OUT is disabled

check that 30mA rms OUT resp. 6mA dc out is enabled M3
